PROFESSIONAL SUMMARY

Versatile Full-Stack Software Engineer with over 5 years of experience architecting, scaling, and delivering production-grade web applications. Recognized for high-velocity product execution and end-to-end ownership across modern frontend frameworks (React, Next.js, Vue.js) and backend infrastructures (Node.js, Express, superbase, relational/NoSQL databases). Proven track record of improving system performance, optimizing data pipelines, and leading cross-functional teams to achieve measurable business outcomes.

EDUCATION

Abia State Polytechnic, Nigeria — Higher National Diploma (HND), Computer Science *February 2015 – June 2020*

Relevant Coursework: System Design and Architecture, computer Packages, Database Management Software programming, application Development.

TECHNICAL SKILLS

Frontend & Core: React.js, Next.js, Vue.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Redux Toolkit

Backend & APIs: Node.js, Express.js, NestJS, REST APIs, GraphQL, Authentication & Authorization, WebSockets

Databases: MongoDB, PostgreSQL, Redis, Git, GitHub, GitLab, Docker, CI/CD, Jest, Agile/Scrum

Cloud Services & Deployment: Vercel, Railway, AWS, Cloudinary, Cloudflare

PROFESSIONAL EXPERIENCE

Full-Stack Engineer *February 2023 – June 2026*
Jamasoft Concepts Limited Hybrid

- Led end-to-end development of enterprise-grade fintech applications utilizing React, Next.js, TypeScript, and Node.js, directly owning feature architecture from initial concept to production deployment.
- Mentored junior engineers, conducted rigorous code reviews, and collaborated closely with the Head of Technology to establish scalable software architecture standards.
- Integrated REST and GraphQL APIs for secure core application workflows, optimizing data-fetching overhead and improving response times by 30%.
- Implemented robust authentication systems, role-based access control, and automated CI/CD pipelines using Docker and Git/GitHub workflows.
- Architected centralized state management systems using Redux Toolkit to seamlessly track cross-service user data and minimize synchronization errors.
- Collaborated with product managers and UX designers during sprint planning to scope technical requirements, translate business objectives into milestones, and accelerate delivery times.

Full-Stack Engineer *January 2025 – January 2026*
Channel Info Technology (Bposeats) Remote

- Designed and maintained full-stack web applications, integrating responsive Vue.js frontend interfaces with robust Node.js and Express.js backend services.
- Translated Figma wireframes and design-system specifications into interactive web modules, spearheading the creation of reusable component libraries.
- Managed complex multi-step form states and dashboard interactive flows using structured state machines.
- Conducted a comprehensive bundle-size analysis and frontend performance optimizations, while driving testing standards using Jest and React Testing Library.
- Optimized asset delivery and image pipelines, decreasing page weight and improving Largest Contentful Paint (LCP) metrics for heavy client dashboards.
- Facilitated cross-functional code debugging sessions and actively contributed to agile sprint retrospectives to systematically eliminate recurring production bottlenecks.

Frontend Developer *June 2020 – December 2022*
Deep Technology Limited Hybrid

- Developed consumer-facing web interfaces from the ground up using React and modern JavaScript development practices.
- Configured application data layers using Apollo Client to efficiently consume backend APIs and manage complex client-side caching states.
- Implemented automated unit testing with Jest and React Testing Library to improve software reliability and reduce post-release bugs.
- Collaborated actively in Agile development processes, leading sprint planning discussions, daily stand-ups, and system debugging sessions.
- Engineered dynamic UI components with CSS Grid and Tailwind CSS to guarantee seamless visual consistency across mobile, tablet, and desktop viewports.
- Established code linting and formatting standards using ESLint and Prettier, increasing clean-code compliance across the engineering team.
- Participated in client-facing feedback loops to rapidly iterate on interface prototypes and refine user onboarding workflows.

PROJECTS

VANTAPP – Fintech Digital Banking Ecosystem

React, Next.js, TypeScript, Node.js, Express.js, PostgreSQL, Redux

- Developed secure, heavily validated identity verification (KYC) and instant virtual card issuance modules utilized daily by 10k+ active accounts.
- Engineered underlying Node.js/Express backend microservices and secure PostgreSQL database schemas to process transactions and handle user state.
- Designed a robust, abstract API wrapper client that encapsulated 4 disparate third-party banking and verification endpoints into a single, fully typed engine.
- Decreased target user drop-off during account registration by 27% through custom inline validation triggers and progressive interactive steps.

HX AFRICA – Interactive Product Studio Showcase

Next.js, TypeScript, Tailwind CSS, Node.js, REST APIs

- Achieved sub-second Time to First Byte (TTFB) globally by shifting the core application runtime onto a fully pre-rendered Static Site Generation model.
- Integrated lightweight Node.js serverless API routes to manage contact submissions, dynamic studio content payloads, and form validations.
- Abstracted a series of decoupled, highly composable design primitives that accelerated subsequent product design deliveries across multiple spin-off client projects.
- Eliminated structural Cumulative Layout Shift (CLS score: 0) by creating explicit font-face display rules and adaptive aspect-ratio image envelopes.

CLOUDNOTTE – Enterprise EdTech SaaS

React, TypeScript, Node.js, Express.js, MongoDB, Redux Toolkit

- Architected the modular frontend interface and corresponding Express/Node backend multi-tenant controllers supporting 5+ institutions and 2k+ active students.
- Engineered an optimized, reusable client-side data grid handling high-density rows with search, pagination, and multi-column filtering, slashing screen delivery time by 50%.
- Implemented secure JWT-based role authorization middleware and efficient MongoDB database indexing strategies to handle heavy concurrent student data queries.
- Improved initial Time-to-Interactive (TTI) metrics by 60% across complex portal interfaces by introducing row virtualization and dynamic code splitting.

TRUEMARK GLOBAL – Corporate Enterprise Compliance Platform

React, Next.js, TypeScript, Node.js, Express.js, MongoDB

- Architected and deployed a highly responsive, end-to-end web application featuring scalable frontend components and secure corporate lead distribution architectures.
- Re-engineered Node.js backend API hooks and Express routing to handle optimized, unsigned asset uploads directly to Cloudinary storage, integrating strong error boundaries.
- Boosted B2B lead generation conversion by 60% through optimized user journeys, localized trust indicators, and strategically mapped call-to-action (CTA) triggers.

DOMINION CITY ABUJA – Church Management & Activity Administration Platform

React, Next.js, TypeScript, Node.js, Express.js, MongoDB

- Architected and deployed an all-in-one administrative dashboard enabling church leadership to manage core operations, including departments, specialized units, regional fellowships, and attendance tracking.
- Engineered secure backend models and API routes using Node.js, Express, and MongoDB to handle sensitive financial records, newcomer intake pipelines, and comprehensive church membership records.
- Developed a media repository module featuring dedicated pages for church galleries where staff can seamlessly upload, manage, and view photos and videos.
- Integrated an on-demand media section allowing members to browse and stream pre-recorded video archives and reels.
